WHERE OUR WORLD MEET THEIR WORLD

MEd

WHAT IS HEARING IMPAIRMENT

Hearing impairment is the inability of an individual to hear sounds adequately. This may be due to lack of proper development of the hearing mechanism or to some damage of the hearing mechanism. Hearing is necessary for the learning the system of speech and language. It also serves to guide the child in his social life. Hearing impairment is the most common type of disability in the school age children. It is the only disability which is not detectable at birth. It is the only disability which is not detectable at birth. It is the only disability which is not detectable at birth.

TYPES OF H-I

CAUSES OF H-I BEFORE BIRTH

1. Rubella infection
2. Cytomegalovirus infection
3. Toxoplasmosis
4. Syphilis
5. Congenital deafness
6. Genetic factors
7. Premature birth
8. Intra-uterine infection
9. Maternal alcohol consumption
10. Maternal drug use
11. Maternal smoking
12. Maternal stress
13. Maternal malnutrition
14. Maternal anemia
15. Maternal diabetes
16. Maternal hypertension
17. Maternal obesity
18. Maternal hypothyroidism
19. Maternal hyperthyroidism
20. Maternal pheochromocytoma

PREVENTION OF H-I

1. Rubella vaccination
2. Cytomegalovirus vaccination
3. Toxoplasmosis vaccination
4. Syphilis vaccination
5. Genetic counseling
6. Premature birth prevention
7. Intra-uterine infection prevention
8. Maternal alcohol consumption prevention
9. Maternal drug use prevention
10. Maternal smoking prevention
11. Maternal stress prevention
12. Maternal malnutrition prevention
13. Maternal anemia prevention
14. Maternal diabetes prevention
15. Maternal hypertension prevention
16. Maternal obesity prevention
17. Maternal hypothyroidism prevention
18. Maternal hyperthyroidism prevention
19. Maternal pheochromocytoma prevention

For more about your child's hearing...

1. Hearing impairment is the inability of an individual to hear sounds adequately. This may be due to lack of proper development of the hearing mechanism or to some damage of the hearing mechanism. Hearing is necessary for the learning the system of speech and language. It also serves to guide the child in his social life. Hearing impairment is the most common type of disability in the school age children. It is the only disability which is not detectable at birth. It is the only disability which is not detectable at birth.

EDUCATIONAL PROGRAMMES AVAILABLE FOR THE H.I. CHILDREN

OUR EXPERIENCE

1. Hearing impairment is the inability of an individual to hear sounds adequately. This may be due to lack of proper development of the hearing mechanism or to some damage of the hearing mechanism. Hearing is necessary for the learning the system of speech and language. It also serves to guide the child in his social life. Hearing impairment is the most common type of disability in the school age children. It is the only disability which is not detectable at birth. It is the only disability which is not detectable at birth.

CHARACTERISTICS OF HEARING IMPAIRMENT

STAGNATION IN BABIES

- 1. Delayed speech development
- 2. Lack of response to sound
- 3. Lack of response to voice
- 4. Lack of response to music
- 5. Lack of response to conversation

STAGNATION IN CHILDREN

- 1. Delayed speech development
- 2. Lack of response to sound
- 3. Lack of response to voice
- 4. Lack of response to music
- 5. Lack of response to conversation

GENERAL SIGNS OF HEARING LOSS

- 1. Delayed speech development
- 2. Lack of response to sound
- 3. Lack of response to voice
- 4. Lack of response to music
- 5. Lack of response to conversation

OTHER SYMPTOMS

- 1. Delayed speech development
- 2. Lack of response to sound
- 3. Lack of response to voice
- 4. Lack of response to music
- 5. Lack of response to conversation
